

## IC Comparisons

Midas Components' LCD Suppliers use a variety of integrated circuit mounting methods in designs of printed circuit boards used with standard and custom made liquid crystal modules. Production methods can accommodate design requirements for the following IC mounting technologies:

- **Surface Mounting Technology (SMT)**
- **Tape Automated Bonding (TAB)**
- **Chip-On-Board (COB)**
- **Chip-On-Glass (COG)**

During the days of high demand of integrated circuit components on the LCD market, our LCD suppliers manage to keep firm control of receiving IC supplies from contractors. Despite the shortage of micro-controllers and drivers in the LCD industry, we are therefore able to minimise the impacts of a constantly fluid supplies market and therefore to provide it's customers with large quantities of high displays utilizing quality electronic chips and maintaining continuity of supply.
